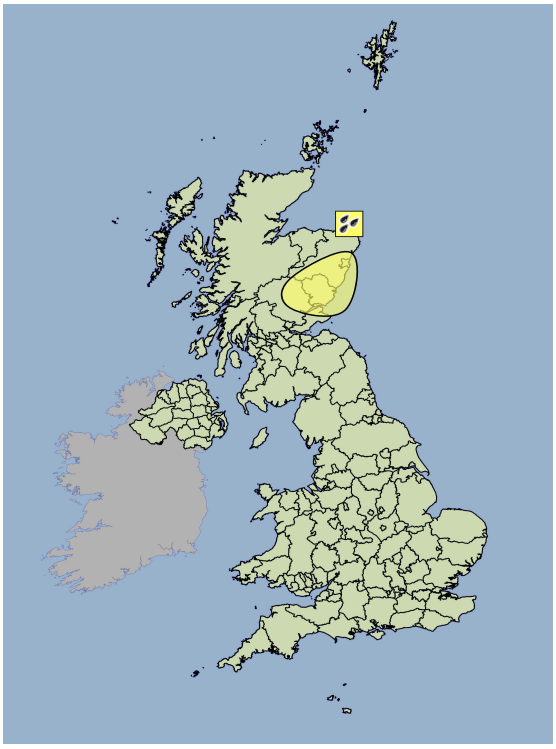
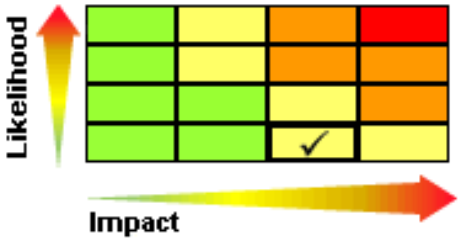
National Severe Weather Warning Service





Chief Forecasters Assessment
During the course of Sunday, a frontal trough will move slowly southwestwards across much of Scotland. A strong easterly airflow accompanying this frontal passage will also contribute to rain falling across much of Scotland, but will be most persistent over eastern areas. Although the rain is not currently expected be especially heavy, it is the combination of the persistence of the rain, together with fairly waterlogged ground, that is likely to lead to impacts necessitating this Alert.

The Met Office have issued a **Yellow Alert** of **Rain**

Valid from **06:00 on Sun, 16th Nov 2014** until **23:45 on Sun, 16th Nov 2014**

Rain, locally rather heavy at times, will spread southwestwards into eastern Scotland during Saturday night, and last through Sunday, coupled with strong easterly winds. This additional rainfall, following the recent wet weather, means that the public should be aware of an increased risk of surface water flooding and spray.
